

# AEGIS AI -- Automated Emergency Response Report

Generated 2026-07-22 21:26 UTC

## Incident INC-AUTO-2-1784755564 (id 35)

Hazard class: explosion

Equipment: V-12

Zone: 3

Risk score: 0.0/100 | Severity: low | Confidence: 0%

## AI-Generated Summary

Automated risk assessment flagged a explosion risk on V-12 at a score of 0.0/100 (confidence 0%). This assessment was produced by the versioned Bayesian Risk Fusion Engine, not this summary generator -- the summary only narrates what was already computed.

Top contributing evidence:

- vision:ignition\_vision (likelihood ratio 22.6)
- sensor:fuel\_gas (likelihood ratio 20.0)
- sensor:ignition\_temp (likelihood ratio 0.1)

Counterfactual: removing 'fuel\_in\_range' from the evidence would change the posterior to 0.0% (from the current assessed probability).

No governing procedure/regulation could be retrieved above the minimum confidence threshold for this hazard class.

## Contributing Factors (ranked by evidentiary weight)

- vision:ignition\_vision (likelihood ratio 22.55) refs: plant\_wide\_camera\_feed
- sensor:fuel\_gas (likelihood ratio 20.00) refs: 1
- sensor:ignition\_temp (likelihood ratio 0.05) refs: 4
- equipment\_health:confinement\_integrity (likelihood ratio 0.07) refs: V-12
- sensor:fuel\_pressure (likelihood ratio 0.09) refs: 2

## Recommendations

- Dispatch a visual inspection to confirm the camera-flagged thermal/smoke indication in person.
- Investigate the gas concentration reading and verify containment integrity on the affected line.
- Inspect for a developing electrical fault or hot surface near the affected equipment.
